

# Rhino-Roll

Temprotech provide shipyards, contractors and outfitters with flame retardant protection products that meet the exacting demands of the Shipbuilding, Shiprepair and Offshore markets.

Protecting floors, surfaces or equipment and maintaining clean work environments are essential to the successful progress and completion of new building or installation projects and during periods of maintenance, repair or refurbishment.

Flame retardant protection materials can reduce dirt, spillages overspray and accidental damage, and eliminate fire hazards for a safer working environment, saving time and money on clean-up, replacement and repairs before handover.

Rhino-Roll is a solid, but flexible and extremely durable material that is ideally suited to the protection of corridors, walkways and horizontal surfaces. Considerable strength makes it ideal for heavy traffic areas and medium to long term protection. The material is light, clean, easy to work with. It is non-marking, puncture resistant and can be re-used, giving a cost effective alternative to traditional floor protection products.

Rhino-Roll can be custom printed with your company name for identification or promotional purposes and can also be supplied in sheet form.
