

Brand leading Correx is extruded from flame retardant polypropylene into a wide range of weights, grades and custom sizes of fluted board.

It provides an extremely versatile form of protection offering light through to heavy duty compression and impact resistance for floors, walls, doors and horizontal surfaces. Correx is light, clean, easy to work with and can be re-used, giving a cost effective alternative to traditional materials.

Custom-designed die-cut protection boxes manufactured from Correx board provide quick and efficient protection for high volume items and superior protection for high value equipment.

A selection of die-cut panels and fixings create a Modular Protection System that offers substantial custom-fit protection for furniture and equipment of all sizes.
